NEW MODEL NUMBERS FOR COBRA® MX

Date: November 24, 2008
Page 1 of 1

In our continuing efforts to improve the design and enhance usability and performance, the Cobra® MX has undergone some internal modifications. Generally, these types of modifications tend to be backwards compatible to previous Models. However, there are times when this is not feasible and new Model Numbers have to be introduced.

Therefore, MK Products announces new Model Numbers for the Cobra® MX Push-Pull Welding Guns. The table below shows current Model Numbers and the new Model Numbers. Once the stock of current Models are depleted, the new Model Numbers will supersede. All gun descriptions will remain the same.

For additional questions, please contact MK Customer Service. Current publications will be corrected at time of printing and new owner's manuals will be available on our web page.
