New Cobra[®] SX is Lightest, Smallest Push-Pull Gooseneck Style Welding Gun Offered by MK Products

Irvine, CA – MK Products introduces the Cobra[®] SX gooseneck gun, which is able to handle more heat without the need for water-cooling and additional components, such as a coolant recirculator.

The Cobra[®] SX is provided as an air-only model to reduce unnecessary cable weight and components. With less than 1 ¼” nominal diameter handle grip and less than 1 lb 12 oz in total gun head weight, the Cobra[®] SX helps reduce welder fatigue. This makes it comfortable to operate, right or left handed.

The Cobra[®] SX feeds aluminum stainless and other hard wire materials, making it ideal for a multitude of welding jobs. Similar to MK Products original Cobra[®] gooseneck gun, the Cobra[®] SX also utilizes the original Cobra[®] consumables, with a Cobra[®] rear trigger location and a high-temperature barrel insulator. The Cobra[®] SX is an ideal push-pull gun for Cobramatic[®] Wire Feeders with gas & trigger control functions.

Established in 1966, MK Products is the original inventor of Cobramatic[®] push-pull wire feed technology and is recognized worldwide as the leader of aluminum welding systems. MK Products also manufactures MK Orbital[™] tube welding systems for exotic alloys and Aircrafter[™] tabletop rotary positioners.
